**ICSFT Statement about
the Medical Status of the Protester: Hassan Ali Mishaima Age: 63 ys**

He is a Bahraini political activist who has been subjected to detention since the sixties of the last century and was jailed for 6 years and still there in detention.

Medical tests showed he is suffering from cancer in the Lymph nodes. He was sent to London in 2010 but his treatment was stopped due to his refusal to give up his legal requests. He was tortured despite his sickness and old age. Doctors advised that he should receive additional doses for 2 years to guarantee non-return of the disease. But after being detained he was injected by unknown material when his head covered. He was told after the second injection that cancer is still active in his body.

His family supported by a lawyer tried to get a report about his status for further follow up with his doctors in London. But their request was denied despite the Bahrain Committee told that he will be seen by another doctor. Moreover the military court refused to provide them with his medical report. Lately he was taken with head covered and injected the 3rd dose of unknown material which was alleged as a treatment.

The International Council Supporting Fair Trial considers that all what is going on with Mr. Hassan is in grieve violation to the simplest human rights in getting due medical care. The ICSFT requests the Human Community and all its organizations concerned with HR to stand beside this protester and to do its best to stop all suspicious acts committed by Bahraini Authorities which could be considered as clear attempt to kill him slowly. The ICSFT calls on all of live consciences to act immediately for his release and re-sending him back to London for completion of his treatment.
